

FOR IMMEDIATE RELEASE
March 25, 2015

Phase # 6 Sanitary Sewer Rehabilitations Project

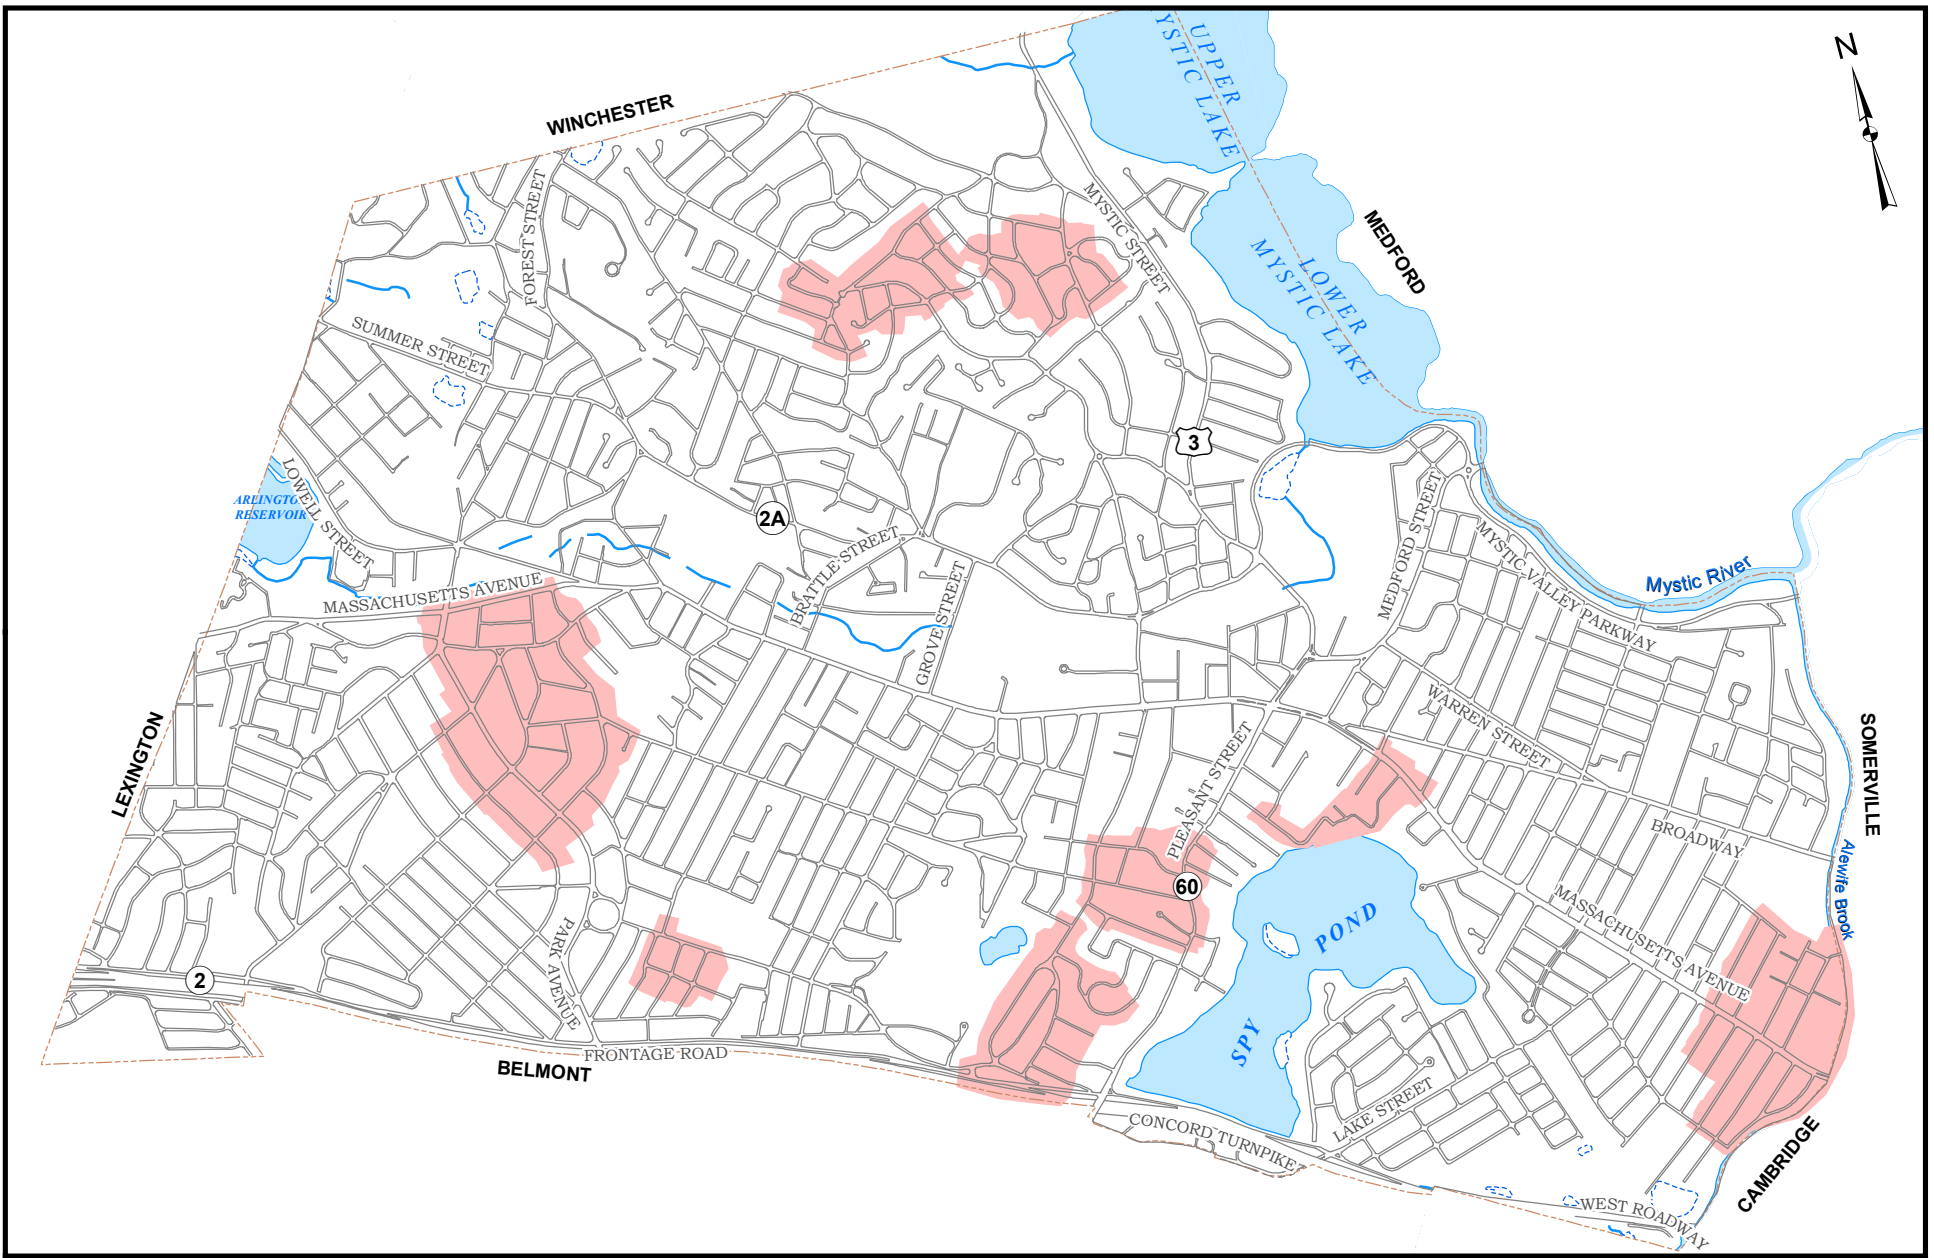

The Town of Arlington has initiated a program to reduce the amount of groundwater (infiltration) and rainwater (inflow) entering the sewer system. Through this program, sources of Infiltration and Inflow (I/I) will be identified and removed. When these sources are removed, the quantity of flow entering the Arlington sewer system and the risk of sewer backups and overflows will be reduced.

The Town's subconsultants, Insituform, Inc. and Inland Waters, Inc. will be conducting sewer manhole and sewer pipe inspections as part of the warranty retest portion of the Phase # 6 Sanitary Sewer Rehabilitations Project.

Crews will be performing inspections between April 6, 2015 and May 15, 2015. The majority of the work will be performed Monday through Friday, between 7:00 a.m. and 5:00 p.m. Nighttime flow isolation work will also be conducted as part of this project. Flow isolation work must be conducted Sunday through Thursday night, between 12:00 a.m. and 6:00 a.m. Flow isolation work involves measuring flow in each sanitary sewer manhole and should only take 10 minutes per location.

The areas to be inspected are highlighted on the attached project map.

Persons performing these inspections will be in clearly marked trucks and will be wearing bright vests. Work will be conducted primarily within the Town's right-of-way and private residences should not be affected.
