# Butterfly Weed

## Asclepias tuberosa (Butterfly Weed)

*Butterfly Flower, Butterfly Root, Butterfly Weed, Chieger Flower, Flux Root, Indian Paintbrush, Indian Potato, Orange Root, Pleurisy Root, Swallow Root, Tuber Root, White Root, Wind Root, Windward Root*

Easy care, drought tolerant and deer resistant, *Asclepias tuberosa* (Butterfly Weed) is a bushy perennial prized for its brilliant clusters of bright orange to yellow-orange flowers which bloom continuously throughout summer. Sitting atop upright flowering stems, clad with stiff, lance-shaped leaves, the colorful umbels, 2-5 inches across (5-12 cm), are followed by attractive seed pods in fall. The abundant foliage provides a dark-green backdrop which nicely

# More Joe-Pye Weed in middle of the grasses

## Eutrochium fistulosum (Joe-Pye Weed)

*Joe-Pye Weed, Trumpetweed, Queen Of The Meadow, Hollow Joe-Pye Weed, Eupatoriadelphus fistulosus, Eupatorium fistulosum*

Towering over the garden, *Eutrochium fistulosum* (Joe-Pye Weed) is an upright, clump-forming perennial boasting huge domed clusters of small, vanilla-scented, pinkish-lavender flowers in mid-summer to early fall. Borne atop erect, strong stems which are hollow, the long-lasting blossoms are attractive to butterflies and pollinators in search of nectar. They give way to attractive, soft buff colored seed heads which persist well into winter. Narrow, lance-shaped leaves, up to 10 in. long (25 cm), are whorled along the erect stem. Native to eastern North America, *Eutrochium fistulosum* provides a wonderful garden presence and late season flowers at a time when choices may be limited. Use it in the informal setting of a cottage garden or allow it to naturalize in a woodland garden.
